

Covid Vaccine Victims

Monica Vásquez Bardales [Mar 19, 2021 at 19:53], <https://t.me/covidvaccinevictims/867>

53 year old Nurse from Lima, was vaccinated on **February 11, 2021**. and died from complications of the vaccine. This is a very sad story as her mother Isabel Bardales also died with days of her passing. I am not sure if her mother's death was caused by a vaccine or not, but if I learn anything I will update the story. I feel for her son who had to bury both his mother and grandmother so close together.

" It was a duty to caution the community while awaiting the resolution of the questions put by the prosecutor: it's only right that it should be done so that we can see if other than the temporal nexus that is evidently there because this is a case where death occurs at a distance of distance Just 16 hours of vaccine administration, we need to see if there is actually an etiological link between the vaccine and the death - this is exactly the answer that will give us the autopsy. We've certainly made many assumptions, but I can't say them now because it's right to check them in the light of the history examinations ".

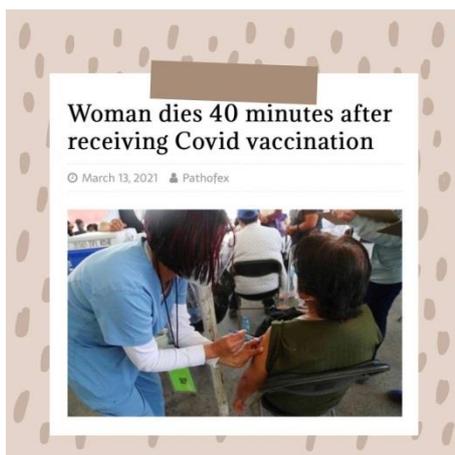

The Prosecutor of Messina, investigating the death of Davide Villa, Catania's Crime Police officer who died on March 7, 12 days after the administration of the AstraZeneca vaccine, will acquire the historical findings already used for the first investigations started by pm of the ethnea city, which then forwarded the dossier to colleagues in the City of the Strait.
